Abstract

The Police-Public Contact Survey (PPCS) provides detailed information on the nature and characteristics of face-to-face contacts between police and the public, including the reason for and outcome of the contact. The PPCS interviews a nationally representative sample of U.S. residents age 16 or older as a supplement to the National Crime Victimization Survey. To date, the PPCS has been conducted six times by BJS:

The first survey - described in the BJS publication *Police Use of Force: Collection of National Data* (NCJ 165040) - documented levels of contacts with police during 1996.

The second survey - described in *Contacts between Police and the Public: Findings from the 1999 National Survey* (NCJ 184957) - recorded police-citizen contacts in 1999. These data are archived as POLICE-PUBLIC CONTACT SURVEY, 1999: [UNITED STATES] (ICPSR 3151).

The third survey - described in *Contacts between Police and the Public: Findings from the 2002 National Survey* (NCJ 207845) - covered interactions between police and the public in 2002. These data are archived as POLICE-PUBLIC CONTACT SURVEY, 2002: [UNITED STATES] (ICPSR 4273).

The fourth survey - described in the BJS publication *Contacts between Police and the Public, 2005* (NCJ 215243) - covered interactions between police and the public in 2005. These data are archived as POLICE-PUBLIC CONTACT SURVEY, 2005: [UNITED STATES] (ICPSR 020020).

The fifth survey - described in the BJS publication *Contacts between Police and the Public, 2008* (NCJ 234599) - covered interactions between police and the public in 2008. These data are archived as POLICE-PUBLIC CONTACT SURVEY, 2008 (ICPSR 32022).

The sixth survey (split sample design due to instrument changes) - new instrument findings described in two publications: *Police Behavior During Traffic and Street Stops, 2011* (NCJ 242937) and *Requests for Police Assistance, 2011* (NCJ 242938) - covered interactions between police and public and public perceptions of police in 2011. These data are archived as POLICE-PUBLIC CONTACT SURVEY, 2011 (ICPSR 34276).

Summary Data Description

- Study 34276 -

Time Period: 2011

Date(s) of Collection: July 1, 2011 - December 31, 2011

Country: United States

Geographic Coverage: United States

Unit of Analysis: Individuals

Universe: English-speaking respondents aged 16 and older to the National Crime Victimization Survey during the last six months of 2011. The universe of the NCVS is all persons in the United States aged 12 and older.

Kind of Data: survey data

Methodology and Processing

Data Collection Methodology

Time Method: Cross-section

Data Collector: United States Department of Commerce. Bureau of the Census

Frequency of Data Collection: Every 3 years

Sampling Procedure:

The National Crime Victimization Survey (NCVS) is an annual survey that collects data on crime against persons age 12 or older from a nationally representative, stratified, multistage cluster sample of U.S. households. BJS conducted a pilot test of the Police-Public Contact Survey (PPCS) in 1996 as a supplement to the NCVS. A revised version of the PPCS was fielded in 1999 among a national sample nearly 15 times as large as the 1996 pilot sample. Since 1999, the PPCS has been administered every 3 years as a supplemental survey to all persons ages 16 or older within households sampled for the NCVS.

The U.S. Census Bureau fielded the 2011 PPCS questionnaire, processed the survey data, and provided estimation specifications. The 2011 PPCS was pretested in the spring of 2011 and conducted between July 1, 2011, and December 31, 2011. Respondents were asked about their contacts with police during the past 12 months. For instance, persons interviewed in July 2011 were asked about contacts that occurred between August 2010 and July 2011. Those interviewed in August 2011 were asked about contacts between September 2010 and August 2011.

The Police Public Contact Supplement (PPCS) questionnaire was revised for the 2011 cycle to better capture contacts with police. These revisions, which included adding new questions and reordering existing questions, were significant changes when compared to the 2008 version of the questionnaire. As a result, the sponsor of the PPCS, the Bureau of Justice Statistics (BJS), requested that the Census Bureau implement both versions of the questionnaire when the survey was conducted in July through December 2011. Using both questionnaires allows for comparisons of the difference in the police contact rate between the two questionnaires. In order to utilize this model it was determined a subset of the sample would be interviewed using the 2008 version of the questionnaire, and the remaining sample would be interviewed using the 2011 version. The BJS requested the ability to measure a 15 percent change in the contact rate, which was about 15 percent in the 2008 cycle. The Census Bureau was asked to provide guidance on what split between old and new questionnaires would provide this accuracy, while maximizing the number of people receiving the new questionnaire. Both a 15 percent/85 percent and a 25 percent/75 percent split of the sample was evaluated. Based on the evaluation, it was determined a 15 percent/85 percent split would be sufficient to meet the needs of the BJS. The Census Bureau used reduction groups to split the 2011 sample and identify which households would get the old or new questionnaire version. Reduction groups are assigned at the beginning of the sample design and divide the sample into representative subgroups with about one percent of the households in each reduction group. The reduction groups were assigned systematically from a random start to all hits (clusters of about four households). For the systematic assignment, the households were sorted by:

- Stratification Primary Sampling Unit (PSU) - county or group of counties
- Frame (Unit, Group Quarters, Area, Permit)
- Order of Selection within stratification PSU

The order of selection within stratification PSU was:

- Study 34276 -

- CBUR (central city of 1999 Metropolitan Statistical Area, Balance of Urbanized Area (2000 based), Urban cluster (2000 based), Rural (2000 based))
- County
- Tract
- Block

The Census Bureau designated 15 of 101 reduction groups, using a random start and systematic sample, to receive the old questionnaire and the rest to receive the new questionnaire. Since the reduction groups are assigned by hit, the approximately four households in the cluster or hit all received the same questionnaire version. The PPCS sample split was done at a household level, so that all persons within the household received the same questionnaire type. The initial split provided a breakdown of 14.9 percent (old questionnaire) to 85.1 percent (new questionnaire). However, in looking at the final interviewed households, the split changed slightly to 15.7 percent versus 84.3 percent. The 2011 PPCS Public Use File (PUF) contains the questions from both the old and the new questionnaire. The PUF is setup so the new or 2011 version is near the beginning and the old or 2008 version is at the end of the file. Specifically, the 2011 PPCS CAPI Instrument contained the variables SQ_USUALLY_DRIVE through PRIOR_USE_FORCE_DURING_EC, which are located from position 84 through 450 on the file. The 2008 PPCS CAPI Instrument contained the variables Q1_USUALLY_DRIVE through Q55_USE_FORCE_DURING_EC, which are located from position 451 through 612.

In 2011 the PPCS interviewed 49,246 of the 62,280 eligible individuals in the NCVS sample. A total of 13,034 nonrespondents were excluded from the 2011 PPCS as non-interviews or as proxy interviews. Non-interviews (10,907) included respondents not available for the interview, those who refused to participate, and non-English speaking respondents. (Unlike the NCVS interviews, PPCS interviews are conducted only in English.) The remaining 2,127 were proxy interviews representing household members who were unable to participate for physical, mental, or other reasons. After adjustment for nonresponse, the sample cases in 2011 were weighted to produce a national population estimate of 241,404,142 persons age 16 or older.

There are three weighting variables on the PPCS PUF as opposed to using one weighting variable for the supplement data. The use of three weights was necessitated by the split sample design, which is discussed above. In positions 24-35 is the PPCS person weight which applies to all persons on the file and should be used for calculating estimates using the entire sample. The overall weight is calculated by multiplying the PPCS base weight by the PPCS noninterview adjustment factor. This adjustment factor weights up to the total PPCS sample for persons interviewed for NCVS but not PPCS. The person weight for the persons interviewed using the 2008 or old questionnaire is located in positions 36-47, while the person weight for the persons interviewed using the 2011 or new questionnaire is located in positions 48-59. For each split sample, the noninterview adjustment factor weights up to the split sample. For example, the adjustment factor for the 15% split sample weights up to the total 15% sample for persons who were assigned to that sample and who were interviewed for NCVS but not PPCS. After that, the weight is multiplied by the inverse of the probability of selection (for the 15% sample - 101/15) to weight up to the total PPCS sample.

Mode of Data Collection: computer-assisted personal interviews

Type of Research Instrument: structured

Characteristics of Data Collection Situation:

The Police-Public Contact Survey (PPCS) interviews a nationally representative sample of households about their contacts with police during the previous 12 months. The PPCS is conducted as a supplement to the National Crime Victimization Survey.

PPCS respondents who received the revised survey instrument were asked about their contact with police during the 12 months prior to their interview. Respondents were provided a list of specific reasons for having contact with police. Persons who had more than one contact were asked more detailed questions about only their most recent contact during the time period.

Citation Requirement: Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications.

Deposit Requirement: To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Visit the ICPSR Web site for more information on submitting citations.

Data Files Description

File-by-File Description

File Name: 2011 Data

Contents of Files:

The PPCS public use file is a six-month person-level file containing data for all PPCS-eligible persons (interviewed and noninterviewed).

The file does not contain information for any households that did not have PPCS-eligible persons in them, nor does it contain information for any persons within a household other than those who were PPCS-eligible.

Prior to its release, the file was reviewed by the Census Bureau's Disclosure Review Board (DRB) to ensure that the contents of the file did not violate any disclosure avoidance measures. In addition, data that may have provided geographic information by inference were blanked because of data confidentiality reasons.

File Structure (rectangular)

File Dimensions:

- No. of Cases: 62,280
- No. of Variables: 527
- Record Length: 1,111
- Records per Case: 1
- Overall No. of Records: 62,280

Type of File: ASCII data file

Data Format: Logical record length

Place of File Production: Ann Arbor, MI: Inter-university Consortium for Political and Social Research

Extent of Processing Checks: The data collection was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to missing data values. Missing values were standardized, and consistency checks were also performed.

2011 Data

Variable Description

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

SCRMCTRL - SCRAMBLED CONTROL NUMBER

Location: 1-20 (width: 20; decimal: 0)

Variable Type: character

Text: The scrambled control number identifies the sample household to which the PPCS respondent belongs. Therefore the values for the scrambled control number are not necessarily unique within the PPCS PUF since there can be multiple PPCS eligible persons within a single sample address.

SAMPLE - SAMPLE DESIGNATION

Location: 21-22 (width: 2; decimal: 0)

Variable Type: numeric

Text: 24-25 Sample designation number

QTYPE - QUESTIONNAIRE TYPE

Location: 23-23 (width: 1; decimal: 0)

Variable Type: numeric

Text: Two versions of the Police Public Contact Survey were administered for the PPCS in 2011. The version labeled "2008 PPCS CAPI Instrument" was the same questionnaire used in 2008 and one labeled "2011 PPCS CAPI Instrument" was a revised questionnaire.

Value	Label
0	2008 PPCS CAPI Instrument
1	2011 PPCS CAPI Instrument

PPCSWGT - PPCS PERSON WEIGHT (INCOMING/CONTINUING)

Location: 24-36 (width: 13; decimal: 0)

Variable Type: numeric

Text: This weighting factor contains five implied decimal places. This weighting factor will be zero for NCVS noninterviewed persons (Type Zs), NCVS proxy interviews, and NCVS interviewed persons that were noninterviews for the PPCS due to an outright refusal to participate, unavailability during the interview period, or a language problem. PPCS noninterview records are identified by a value of '5' in the PPCS_TYPEINTV variable.

PPCSWGT2008 - PPCS PERSON WEIGHT (INCOMING/CONTINUING) 2008

Location: 37-49 (width: 13; decimal: 0)

Variable Type: numeric

Text: The verbatim responses captured during the original interview were reviewed post- data collection and classified. Literal recodes for what the respondent was ticketed for (reported in the field TRFSTP_REASON_FOR_TICKET_SP) were classified in TRFSTP_REAS_CELL_PHONE. Since TRFSTP_REASON_FOR_TICKET_SP was only a write-in field and not part of a list of answer categories, this variable is one of 22 variables created to code what the respondent was ticketed for.

<i>Value</i>	<i>Label</i>
1	Verbatim response entered in TRFSTP_REASON_FOR_TICKET_SP classified here when the ticket was issued for using a cellphone while driving.
